DETAILED ACTION

Claim Objections

1. Claims 1 and 8 are objected to because of the following informalities:

Claim 1, "a fluorescent light bulb" in lines 10-11 and 15-16 should be changed to —the fluorescent bulb—for consistency.

Claim 8, "a fluorescent light bulb" in lines 10-11 and 18-19 should be changed to —the fluorescent bulb—for consistency.

Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, 3, 4, 7, 8 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Vest [US 4,644,453] in view of Carmo [US 5,528,477].

Regarding claims 1 and 8, Vest discloses a support and enclosure structure for fluorescent light bulb having an elongated hollow tube [11], end cap means [51] to engage opposite ends of a fluorescent light bulb [12], mounting end cap means [13] and the tube [11] being constructed of generally rigid and transparent (figures 1-2). Vest does not clearly disclose the ventilation opening.

Application/Control Number: 10/786,870

Art Unit: 2875

Carmo discloses a ventilation opening [124] on a tube [36] of a portable fluorescent light [20] (figure 2).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the hollow tube of Vest with the ventilation opening as taught by Carmo to release heat generated by the light bulb for purpose of providing an advantageous way of increasing lifetime of the light bulb.

Regarding claim 2, Vest discloses a cylindrical shape tube [11] (figure 1).

Regarding claim 3, Carmo discloses a longitudinally extended slot [124] (figure

2).

Regarding claim 4, Carmo discloses a plurality of holes [124, 330] (figure 2).

Regarding claim 7, Vest discloses mounting end cap means [13] (figures 1-2).

Regarding claim 9, Carmo discloses a mounting pin [40] and a wire slot for wire [42] (figures 1-2).

4. Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vest and Carmo in view of Darr [US 5,140,216].

Regarding claim 5, Vest discloses end cap means [51] with an external diameter approximately equal to the internal diameter of the hollow tube [11] and an electrode opening [41]. However, Vest does not disclose the end cap means having the outer flange.

Darr discloses end cap means [28, 33] having an outer flange (figures 2-3).

Application/Control Number: 10/786,870

Art Unit: 2875

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the end cap means of Vest by the outer flange as taught by Darr for purpose of providing an advantageous way of removing and assembling the end cap means to the hollow tube.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Vest and Carmo in view of Shima [US 5,909,953].

Regarding claim 6, Vest discloses a hollow tube [11] and a wire [87, 88] running back along the hollow tube [11] (figure 2). However, Vest does not disclose the wire channel being formed on a surface of the tube.

Shima discloses a fluorescent lighting fixture having a wire channel [8] being form on a surface of a tube [2] for receiving an electrical wire [6] (figures 1-3).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the hollow tube of Vest with the wire channel as taught by Shima to receive an electrical wire for purpose of providing an advantageous way of making an electrical wire hard to be seen while lighting the fluorescent light fixture.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bao Q. Truong whose telephone number is (571) 272-2383. The examiner can normally be reached on Monday-Friday (8:00 AM - 4:00 PM).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Sandra L. O'Shea can be reached on (571) 272-2378. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
